Did You Know?
Diabetes in Kentucky is common, serious, costly, and controllable. It affects thousands of individuals in Kentucky and poses a major public health problem.

Diabetes is COMMON
1 in 10 adults have diabetes, one third do not know they have it! (2001)
1 in 2 adults is at increased risk for developing diabetes largely due to risk factors such as being overweight and/or inactive. (1999)

Diabetes is SERIOUS
Diabetes is the 5th leading cause of death by disease. (1999)

Diabetes is COSTLY
Direct and indirect cost of diabetes totaled approximately $2.4 billion in 1999.

Diabetes is CONTROLLABLE
Research indicates that complications and deaths related to diabetes can be reduced through quality care and aggressive treatment.

Who We Are
The Kentucky Diabetes Prevention and Control Program (KDPCP) is a public health initiative consisting of a network of state, regional, and local health professionals whose mission is to reduce new cases of diabetes as well as the sickness, disability and death associated with diabetes and its complications.

What We Do
Community Mobilization
♦ Mobilize local and state partnerships to identify and positively impact diabetes-related issues.

Public Awareness
♦ Promote state and national diabetes campaign materials and messages to the public.

Community Group Education
♦ Provide classes to inform, educate and empower those with or at risk for diabetes.

Professional Education/Quality Improvement
♦ Facilitate efforts to improve access to quality care for those with or at risk for diabetes.

Surveillance and Evaluation
♦ Monitor data to assess the impact of diabetes, plan appropriate interventions and evaluate the effectiveness of program efforts.

Where We Are
For details about what diabetes-related activities are available in your area, contact your district/local health department, or the state KDPCP staff listed below and on the reverse side of this brochure.
